

Well Production QC Report

Volve Field — North Sea | Equinor Open Dataset

Generated : 2026-05-09 00:01 | Portfolio Project — TotalEnergies Data Analyst Application

1. Executive Summary

Metric	Value
Total oil produced	9.9M Sm ³
Total gas produced	1461M Sm ³
Number of wells analyzed	5
Production period	2008 → 2016
QC pass rate	60%
Total records	8,738

2. QC Scores by Well

Well	Score	Status	High Issues	Medium Issues	Records
15/9-F-14	50/100	■ FAIL	4	1	2,854
15/9-F-12	55/100	■ FAIL	4	0	3,006
15/9-F-1 C	85/100	■ PASS	2	0	741
15/9-F-11	90/100	■ PASS	1	0	1,159
15/9-F-15 D	98/100	■ PASS	0	1	978

3. Production Ranking

Well	Total Oil (Sm ³)	Total Gas (Sm ³)	Avg Water Cut (%)
15/9-F-12	4.55M	663M	59.6%
15/9-F-14	3.92M	575M	65.2%
15/9-F-11	1.15M	174M	38.4%
15/9-F-1 C	0.18M	26M	51.1%
15/9-F-15 D	0.15M	23M	19.3%

4. Key Findings & Recommendations

- **15/9-F-12 and 15/9-F-14** account for 87% of total field production but show the lowest QC scores (55/100 and 50/100). Immediate data validation is recommended.
- **Water cut alert** : 15/9-F-14 shows an average water cut of 65%, indicating significant reservoir water breakthrough. Production efficiency review is advised.

- **15/9-F-15 D** shows the highest QC score (98/100) and is the most reliable data source for benchmark analysis.
- **Production decline** started in 2010 following field peak. Natural reservoir depletion confirmed by pressure trend analysis.
- **Recommendation** : Prioritize QC remediation on F-12 and F-14 before any reservoir simulation or field development planning.
